Applicants and their counsel have carefully reviewed the Office Action dated April 21, 2005, but believe the claims in their present form are patentable over the teachings of the references relied upon by the Examiner. Reconsideration of the application in view of the following arguments in support of patentability is therefore respectfully requested.

REMARKS:

In the April 21, 2005 Office Action, claims 14-18, 20 and 21 were rejected under 35 U.S.C. §103(a) as being unpatentable over Kieval et al. '620 in view of Lu et al. The Examiner stated the Kieval et al. '620 reference teaches a pacemaker system wherein fusion beats are detected and the number of such fusion beats that occur over a predetermined time interval or a number of pacemaker cycles is also monitored, to determine whether the percentage occurrence of fusion beats is acceptable. The Examiner also noted that the Kieval et al. '620 reference teaches automatically shortening the AV interval if an unacceptable fusion percentage is detected.
